Hi Everyone,

Thanks for your submissions and comments on the STL Site Tool template. We plan to finalize a first cut of the populated tool by July. Kira, Felicia and I will provide a brief update for the STL's this Thursday. We'll have a broader discussion on the 6/20 STL call based on review of the consolidated table.

We've made minor changes to address STL, OSWER partner, OSP, and TSC Director suggestions that include:

• Addition of a State Column to ease in searching/sorting; and

• Clarification of specific content to include in each field with addition of technologies and SSID (see the tab "Notes for STL Assistance").

STLs- please take a moment to review the changes as the clarifications may require some updates. For example, we've further defined the difference between the "Project" and "Brief Notes/Benefits" columns. Also, we've asked that a description of the technology being evaluated or used be included in the "Project" description.

Dave, John, Felicia, Dan, and Greg,

As a next step, we'd appreciate your review in the next couple weeks to share any additional key

support activities you're aware of with the appropriate STL (and copy me if you would). We'd also like to invite you to join us on the 6/20 STL Call (11-12:30 am) to share your impression and our plans for periodic updates, etc. (look for Terry Burton's invite as our June STL call leader).

Please let Felicia, Kira, or I know if you have questions and thanks again,

Valerie
